a. On 3 May 2005, the new SISPE management model came into operation. This has involved a change in the way registered unemployment is obtained (basically, those groups that should be excluded from outstanding demand are calculated in another way owing to an improvement in the data cross-checking processes). The inclusion of the new registered unemployment data entails a break in the series in January 1996.

b. Homogeneous time series published by the INEM begin in January 1996.

c. Homogeneous time series published by the INEM begin in February 2001.
